

Given : \mathbf{I} = interactions(\mathbf{P}, \mathbf{H})

Learn :

- (1) $\frac{1.0}{1.0 + \max(\mathbf{I}[i,:])}$: importance of \mathbf{p}_i
- (2) $\mathbf{H} \cdot \text{softmax}(\mathbf{I}[i,:])$: soft best match of \mathbf{p}_i
- (3) $\text{argmax}(\mathbf{I}[i,:])$: hard location of best match of \mathbf{p}_i
