

Step 1: Start with previous pulse

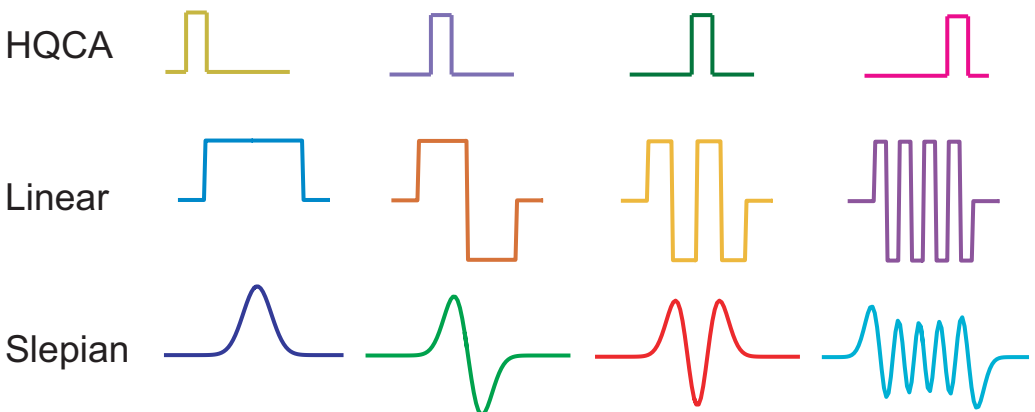

Step 2: For $k=1:k_{\max}$, measure $F^{k,\pm x}$

Step 3: Compute gradients, $g_k \propto F^{k,+x} - F^{k,-x}$

Step 4: Sum over k to obtain final gradient $\mathbf{g} = \sum_k g_k \mathbf{v}^k$

*Waveforms corresponding to different basis sets \mathbf{v}^k

Step 5: Update pulse by adding \mathbf{cg} to x -phase.
Similarly obtain gradient in y -phase.
