

Application layer

Future direction

Privacy and security

Earable computing

Sensor repurposing

Platform and data

Core techniques layer

Temporal features

One-way sensing

Two-way sensing

Phase-based sensing

Starting point detection

Channel characteristics

Parametric modeling

Data-driven

Waveform design

Pure tone signals

FHSS

Chirp

OFDM

Challenges

Starting point detection

Low complexity, synchronization free

Calibration

Proper modeling

Platform diversity

Calibration

Better channel gain

High-speed, long-range

Physical layer

Over-the-air channel

Doppler

Path loss

Temperature

Reflection, refraction, and diffraction

Structure-borne channel

Acoustic resonance

Acoustic dispersion

Challenges

Platform diversity

System delay

Frequency selectivity

Speaker diaphragm inertial

Acoustic hardware
