

Memory Mode

Application

```
graph TD; App[Application] --> VMP[Volatile Memory Pool]; subgraph VMP; DC[Optane DC Persistent Memory]; DRAM[DRAM as Cache (Near-Memory)]; end
```

The diagram illustrates the Memory Mode architecture. At the top, a blue box labeled 'Application' has three blue arrows pointing down to a light gray box labeled 'Volatile Memory Pool'. Inside this pool, there are two dashed-line boxes: 'Optane DC Persistent Memory' at the bottom and 'DRAM as Cache (Near-Memory)' at the top.

DRAM as Cache (Near-Memory)

Optane DC Persistent Memory

App-direct Mode

Application

```
graph TD; App[Application] --> Optane[Optane DC Persistent Memory]; App --> DRAM[DRAM]
```

The diagram illustrates the App-direct Mode architecture. At the top, a blue box labeled 'Application' has three blue arrows pointing down. Two arrows point to a dashed-line box labeled 'Optane DC Persistent Memory', and one arrow points to a dashed-line box labeled 'DRAM'.

Optane DC Persistent Memory
