Calculate

Mathematical Model [\(Doc\)](#)

- Multicopter Mass : $m = 1.4$ kg
- Acceleration of Gravity : $g = 9.8$ m/s²
- MultiCopter Inertia Matrix : $J_{xx} = 1.704e-2$ kg.m²
 $J = \text{diag}(J_{xx}, J_{yy}, J_{zz})$ $J_{yy} = 1.704e-2$ kg.m²
 $J_{zz} = 3.176e-2$ kg.m²
- Distance of Motor to Center : $d = 0.225$ m
- Propeller Thrust Coef. (T_p/ω^2) : $C_T = 9.286e-6$ N/(rad/s)²
- Propeller Moment Coef. (M_p/ω^2) : $C_M = 1.189e-7$ N.m/(rad/s)²
- Throttle σ to Motor steady speed : $C_R = 691.33$ rad/s
 $\omega_{ss} = C_R \cdot \sigma + \omega_b$: $\omega_b = 162.59$ rad/s
- Motor-Propeller Inertia : $J_m = 8.18e-5$ kg.m²
- Motor Response Time Constant : $T_m = 0.0119$ s
- Air-Drag D Coef. ($D = C_d \cdot V^2$) : $C_d = 6.697e-2$ N/(m/s)²
- Air-Torque M Coef. ($M = C_m \cdot \omega^2$) : $C_m = 9.174e-3$ N.m/(rad/s)²
