

CLINICAL DATA

OUR METHOD

DISEASE SUBGROUPS

Latent space with novel clustering among patients (can be of higher dimension).

0, 1, 1, 0, 0,	-0.5, 1.9, 0.23,	0.1, 0.2
1, 1, 1, 0, 0,	1.2, 2.3, 1.2,	0.8, 0.87
0, 0, 0, 0, 0,	1.3, -0.1, Null,	0.2, 0.3
....		
1, 0, 0, 1, 1,	1.5, 2.4, 1.5,	0.9, 0.22

Patient records comprising of binomial, Gaussian, beta, etc., distributed data and missing values.

Probabilistic unsupervised learning technique that tries to learn a low dimensional latent representation of each patient record such that the distances between patients are preserved.
