

all data

validation

test model on
validation set and
create list of non-
conformity scores

$$\alpha_i = \frac{\|y_i - \hat{y}_i\|}{\exp(\sigma_i)}$$

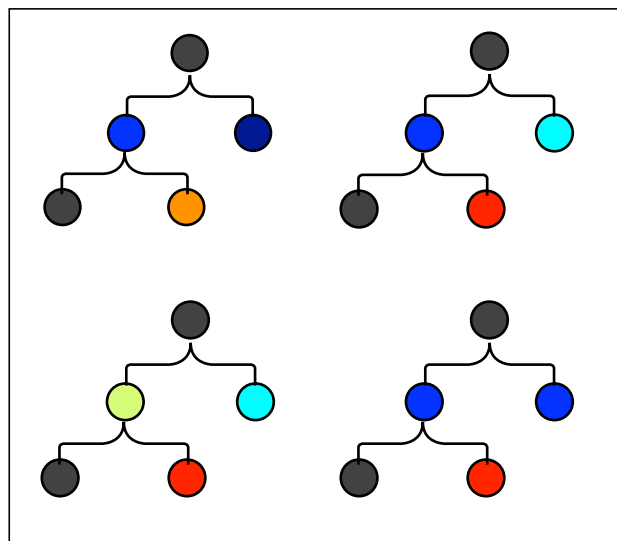

α

0.77	0.64	0.33	0.21
20	20	20	20

%

select score $\alpha_{\mathbf{CL}}$ for a
confidence level

train

train a tree model that
can give an average \hat{y}_i
and a variance σ_i

$\alpha_{\mathbf{CL}}$

test

make predictions on
test examples

\hat{y}_i

σ_i

$\hat{y}_i \pm (\exp(\sigma_i) \cdot \alpha_{\mathbf{CL}})$
