

a**b****c**

Beta particles create ionization electron-hole pairs (e^- / h^+) continuously in dense materials

Josephson junction

x-rays interact in the surface
 γ -rays are deeply penetrating

Impinging radiation

Photon (γ):

Beta ($\beta^{-/+}$):

Energy relaxation carriers

Ionization: e^- / h^+

Phonon:

Superconducting phenomenon

Cooper pair:

Quasiparticle:

$e^- e^-$

e^-
