

# Highly Reliable Approach

```
graph TD; A[Highly Reliable Approach] --> B[Fault Resource Tolerance]; A --> C[Self-Awareness Technique]; A --> D[Efficient Reliability Evaluation];
```

## Fault Resource Tolerance

- Handle all possible fault resources.
- Sufficiently tackle with fault probability
- Well combine the fault-tolerant techniques.

## Self-Awareness Technique

- Self-detecting the failure.
- Self-diagnosis the failure's type and position.
- Self-recovery the failure based on type and position

## Efficient Reliability Evaluation

- Evaluate the capacity of fault-tolerant with several fault injection rate.
- Analytical model for high level evaluation.
- Reliability calculation provides the functions or parameters.
