

Figure 1 is a plot showing the relationship between specificity (x-axis, ranging from 40% to 100%) and sensitivity (y-axis, ranging from 0.08 to 0.70) for five different cycles. The plot includes a grid and a legend in the bottom-left corner identifying the cycles by line style: cycle 1 (dotted), cycle 2 (dash-dot), cycle 3 (dashed), cycle 4 (long-dashed), and cycle 5 (solid). All cycles show a positive correlation between specificity and sensitivity. A red hexagon marks a point on the cycle 5 curve at approximately (98%, 0.65), with an arrow pointing to it.

Specificity (%)	Sensitivity (Cycle 1)	Sensitivity (Cycle 2)	Sensitivity (Cycle 3)	Sensitivity (Cycle 4)	Sensitivity (Cycle 5)
40	0.08	-	-	-	-
68	-	0.08	-	-	-
70	-	-	0.08	-	-
72	-	-	-	0.08	-
82	-	-	-	0.15	0.08
85	-	-	0.08	-	-
88	-	-	-	0.08	-
90	-	-	-	-	0.25
92	-	-	0.25	-	-
95	-	-	-	0.25	-
98	-	-	-	-	0.65
100	-	-	0.25	-	-
