

Figure 1 is a plot showing the relationship between specificity and sensitivity for five different cycles of a model. The x-axis represents specificity, ranging from 82% to 100%. The y-axis represents sensitivity, ranging from 0.03 to 0.08. The plot includes a legend in the bottom-left corner identifying the five cycles: cycle 1 (dotted line), cycle 2 (solid line), cycle 3 (solid line), cycle 4 (solid line), and cycle 5 (solid line). The plot shows that as specificity increases, sensitivity generally decreases. A red hexagon is placed on the plot, indicating a specific point of interest on cycle 5 at approximately 97.5% specificity and 0.075 sensitivity. An arrow points to this hexagon.

Cycle	Specificity (%)	Sensitivity
1	81.5	0.08
1	88.5	0.03
1	91.5	0.08
1	95.5	0.03
1	97.5	0.08
1	99.5	0.03
1	100.0	0.25
2	81.5	0.08
2	88.5	0.03
2	91.5	0.08
2	95.5	0.03
2	97.5	0.08
2	99.5	0.03
2	100.0	0.25
3	81.5	0.08
3	88.5	0.03
3	91.5	0.08
3	95.5	0.03
3	97.5	0.08
3	99.5	0.03
3	100.0	0.25
4	81.5	0.08
4	88.5	0.03
4	91.5	0.08
4	95.5	0.03
4	97.5	0.08
4	99.5	0.03
4	100.0	0.25
5	81.5	0.08
5	88.5	0.03
5	91.5	0.08
5	95.5	0.03
5	97.5	0.08
5	99.5	0.03
5	100.0	0.25
