

## (1) Adversarial Data Programming (ADP)

## (2) Labeling Functions are Given by Domain Experts

```
def  $l_1(\text{Image})$ :  
  If blob;  
  return [1,0,...,0]
```

```
def  $l_2(\text{Image})$ :  
  If vertical;  
  return [0,1,...,0]
```

```
def  $l_3(\text{Image})$ :  
  If Bag_of_Feature;  
  return [1,0,...,0]
```

## (3) Relative accuracies and inter-functional dependencies are measured by considering real label as a hidden variable
