

## A Defining MACCs

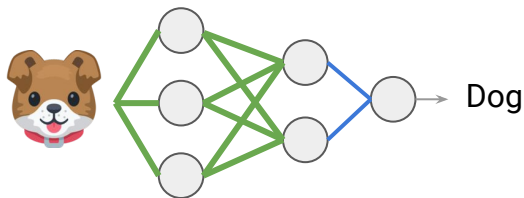

**Concepts (MACCs)**

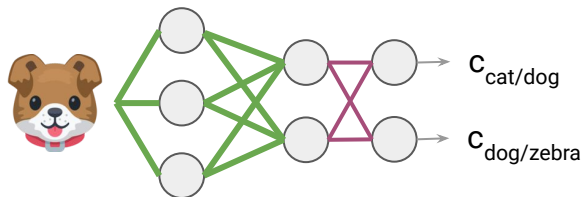

Classes	$C_{\text{cat/dog}}$	$C_{\text{cat/zebra}}$	$C_{\text{dog/zebra}}$
Dog	✓	✗	✓
Cat	✓	✓	✗
Zebra	✗	✓	✓

## B Detecting MACCs in DNNs

1.  $[F_{\text{clf}}]$  Trained to predict class labels (as usual)

2.  $[F_{\text{con}}]$  Same hidden representations used for MACCC detection

## C Explanation Conformity Check

Test Input	Predicted Class	Predicted MACCs
	Dog	$C_{\text{cat/dog}}$ $C_{\text{dog/zebra}}$
	Cat	$C_{\text{dog/cat}}$ $C_{\text{dog/zebra}}$
