- With regard to the association of **favipiravir** administration (favipiravir is a potent and selective **RNA-dependent RNA polymerase** inhibitor) and NMS development, it is considered that favipiravir could cause rhabdomyolysis because patients with influenza treated with favipiravir exhibited increased CK levels [10] .

May 22, 2020

- Favipiravir** is an anti-viral agent that selectively and potently inhibits the **RNA-dependent RNA polymerase** , it has been used for treatment of some life-threatening infections such as Ebola virus, Lassa virus and rabies.
