

1. The trachea is the windpipe, which carries air from the larynx to the bronchi.
2. The bronchi are the main airways that branch off from the trachea and lead to the lungs.
3. The bronchioles are the smaller airways that branch off from the bronchi and lead to the alveoli.
4. The alveoli are the tiny air sacs where gas exchange takes place.
5. The pleural cavity is the space between the two lungs, which contains a small amount of fluid to lubricate the lungs.
6. The diaphragm is a muscular partition that separates the thoracic cavity from the abdominal cavity.
7. The rib cage is the bony structure that protects the lungs and other organs in the thoracic cavity.
8. The intercostal muscles are the muscles between the ribs that help with breathing.
9. The pharynx is the part of the throat at the back of the mouth.
10. The larynx is the voice box, which is located at the top of the trachea.
