

## Specify Contrast Factors

You indicated that you want to align-and-rank data for contrast tests. Below are the factors and levels found in your data table. Find the levels you want to contrast and select their factors with checkboxes. A suitable data table will be created for you with adjusted factor columns and a new aligned-and-ranked response. Then, using this new data table, run a full factorial model followed by contrasts for the specific levels you want.

Data File: Higgins1990-Table5.csv

Output File: Higgins1990-Table5.art-c.csv

☐ Moisture: 1, 2, 3, 4

☐ Fertilizer: 1, 2, 3, 4
