

## Graph models & representations

Adjacency  
Matrix

Log(Graph)

Adjacency  
structure

Fine grained  
elements

Adjacency  
List

**CSR aka  
Adjacency  
Array**

Offset  
structure

## Compression schemes

Bit packing

Succinct  
& compact  
bit vectors

### Vertex relabelings

Huffman degree  
(degree minimizing)

Recursive  
bisectioning    ■ ■ ■

### Various encodings

Variable-  
length  
encoding

Reference  
encoding

$k^2$ -trees

Run-length encoding

Gap  
encoding

**1**

Pick a graph  
representation

**2**

Provide appropriate  
graph accesses

**3.1**

Apply a relabeling  
(a permutation of  
vertex IDs)

**3.2**

Apply transformations  
(e.g., a compression)
