

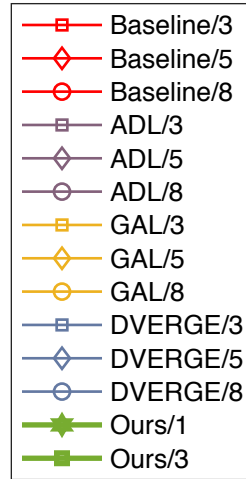

Figure 3 is a line graph showing Accuracy (%) on the y-axis (ranging from 0 to 100) versus Perturbation strength ϵ on the x-axis (ranging from 0 to 0.07). The graph displays the robustness of various models or methods under increasing perturbation. Most methods show a gradual decrease in accuracy as the perturbation strength increases, while a few methods (red and purple lines) drop sharply to 0% accuracy at $\epsilon = 0.02$.

Perturbation strength ϵ	Green Star	Blue Circle	Blue Square	Blue Diamond	Yellow Square	Yellow Circle	Yellow Diamond	Red Circle	Purple Circle
0	90	95	92	93	90	90	90	95	95
0.01	85	88	82	85	78	75	78	10	22
0.02	78	72	70	75	60	45	55	0	0
0.03	65	58	55	60	40	22	32	0	0
0.04	52	48	35	40	22	8	15	0	0
0.05	40	33	20	23	10	2	5	0	0
0.06	28	21	8	13	5	0	2	0	0
0.07	18	10	3	5	0	0	0	0	0
