

$$\left. \begin{array}{c} r_0^- \\ r_1^+ \\ r_2^+ \\ \vdots \\ r_{n+1}^+ \end{array} \right\} = B'$$

---

$$\left. \begin{array}{c} \hat{b}_0 \\ b_1 \\ \vdots \\ b_{n-1} \\ \hat{b}_n \\ \hat{b}_{n+1} \end{array} \right\} = \frac{\sqrt{2}}{\beta} I$$

The image shows a large matrix equation. The matrix is partitioned into two main sections by a horizontal dashed blue line. The top section contains rows labeled r\_0^-, r\_1^+, r\_2^+, ..., r\_{n+1}^+. The bottom section contains rows labeled b\_0-hat, b\_1, ..., b\_{n-1}, b\_n-hat, b\_{n+1}-hat. The matrix is sparse, with non-zero entries on the main diagonal and some off-diagonal elements in the top section. The top section is grouped by a right curly brace and labeled = B'. The bottom section is grouped by a right curly brace and labeled = (sqrt(2)/beta) I.
