

Problem Instance

Ising Objective: $\min(\sum_i h_i S_i + \sum_{ij, i < j} J_{ij} S_i S_j)$

Programming into QPU

- Embedding cost function in Chimera graph
- Initialization of h_i (Bias) and J_{ij} (Weight)
- h_i and J_{ij} loaded into qubits and couplers
- Qubits in superposition; Setup Anneal time

Resample

Resample k times: k different solutions

Classical Computation

Quantum Computation

Quantum Annealing

Transition to ground state:
Bias and Weight changes

Read Out

Transition ends:
Read out Bias and Weight
