

Figure 1 is a heatmap showing the Pearson correlation coefficients between 16 different graph neural network (GNN) models. The models are listed on both the x-axis and y-axis: GAT, GCN, GIN, Lookup, MLP, Mean, Sum, DGI, DW, GCA, GraphCL, LINE, MVGRL, Bilinear, Inner, InfoNCE, and JSD. The color scale ranges from -0.5 (blue) to 0.5 (red), with white representing 0.0. The heatmap reveals a block-like structure of correlations, indicating that certain groups of models are more similar to each other than to others. For example, GAT, GCN, GIN, and MLP show strong negative correlations with each other, while GAT, GCN, GIN, and MLP show strong positive correlations with Mean, Sum, DGI, DW, GCA, GraphCL, LINE, and MVGRL. The diagonal elements are all white, indicating a correlation of 1.0 for self-comparisons.

Heatmap showing the correlation between various graph neural network (GNN) models. The models listed on the axes are GAT, GCN, GIN, Lookup, MLP, Mean, Sum, DGI, DW, GCA, GraphCL, LINE, MVGRL, Bilinear, Inner, InfoNCE, and JSD. The color scale ranges from -0.10 (blue) to 0.25 (red). The diagonal is white (0.00).
