

## Observed Weighted Block Pushing Environment

Underlying Causal Graph

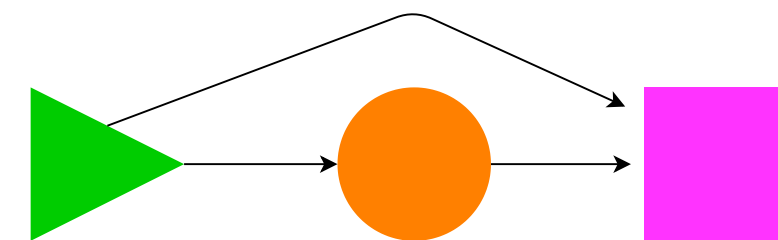

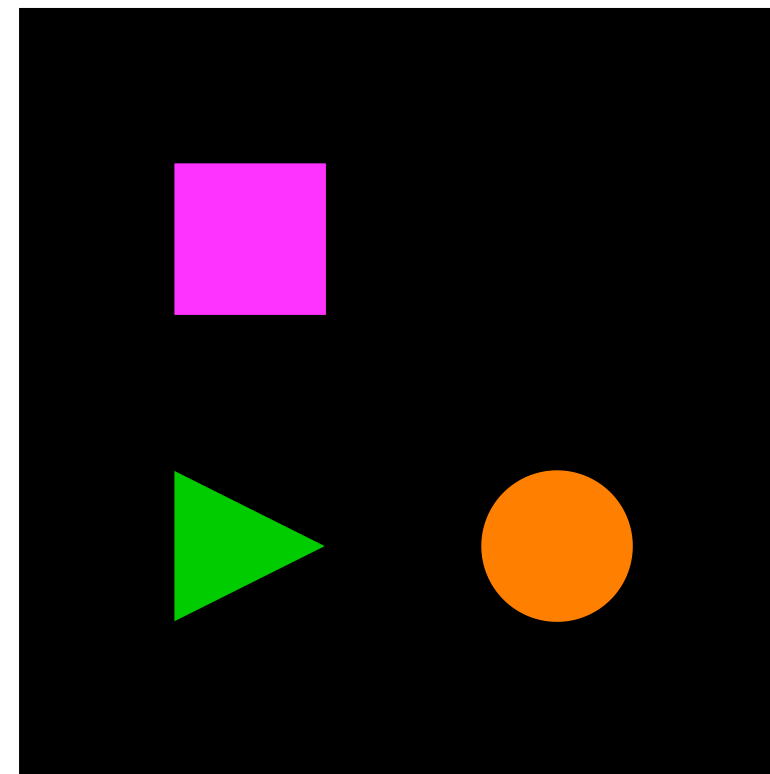

**Where should this new object be placed in the causal graph?**

Even if a model hasn't seen this shape and/or colour, it should still be able to insert it in the graph correctly.

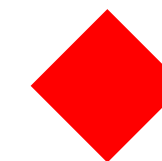

Increasing weight →

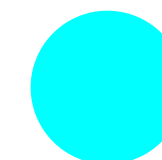

## Unobserved Weighted Block Pushing Environment

Underlying Causal Graph

The model hasn't seen the shape before but has seen red colour before. So it should still be able to insert the object in the above causal graph

The model hasn't seen this colour before. So it will not be able to insert this object in the above causal graph without performing some interventions
