

Dataflow	Design Point	Description
<b>Naïve</b> (intra-operator dataflow)	<b>Naive</b>	Intra-operator weight-stationary dataflow with fixed tile size, seen in many DNN accelerators [1][2][27]
<b>Flex</b> (intra-operator dataflow)	<b>Flex-opt</b>	We exhaustively search for optimal intra-operator dataflow, reflecting the optimal solution can be found in existing intra-operator MSEs/mappers [31][37][45]
<b>FLAT</b> (intra- and inter-operator dataflow)	<b>FLAT-opt</b>	We exhaustively search for optimal intra-operator as well as inter-operator dataflow, enabled by FLAT.
