

```

1  import pandas # import
2
3  # message data
4  def message_data(dta):
5      dta.dropna(inplace=True)
6      dta.drop([149], inplace=True) # bad line
7      return dta
8  #end
9
10 data = pandas.read_csv("iris.data")
11 data = message_data(data)
12 if len(data) > 10:
13     sample = data.head(n = 10)
14 else:
15     sample = data
16 print(sample)

```

#### (a) Running Example

---

```

1  import pandas as pd
2
3  test_df = pd.read_csv('test.csv')
4  test_df.to_csv('mod_data.csv')

```

#### (b) Another Script

---

```
"""
```

Returns

DataFrame or TextParser

A comma-separated values (csv) file is returned as two-dimensional data structure with labeled axes.

```
"""
```
