

Prompt

```
def largest_divisor(n: int) -> int:
    """ For a given number n, find the largest
        number smaller than n that divides n evenly
    """
    >>> largest_divisor(15)
    5
    """
```

Canonical
Solution

```
for i in reversed(range(n)):
    if n % i == 0:
        return i
```

Test
Cases

```
def check(candidate):
    assert candidate(3) == 1
    assert candidate(49) == 7
```

```
def sum(x, y):
```

```
    """
    Returns the sum of x and y
    """
    print('Hello world')
```

Irrelevant
Preceding
Function

```
def concatenate(s):
```

```
    """
    Returns the concatenation of all
    strings in s
    """
```

```
print('Hello world')
```
