Criteria

Yes

## Return

Last population

```
P ← ∅  
for i = 0 : n do  
  model(i).dna = random initialization  
  model(i).accuracy = Fitness(Model(i).dna)  
  Add model(i) to population P
```

```
While stopping criteria is not satisfied:  
  Sample ← Randomly select m models from P  
  Parents ← Selection(samples)  
  Children.dna ← Evolutionary (Parents)  
  Children.accuracy ← Fitness (Children.dna)  
  Remove the worst model in P
```
