

Dear Editor,  
Dear IJRNC team,

Please find attached out paper

“Safe Hierarchical Model Predictive Control and Planning for Autonomous Systems“

Which we would like to submit to the special issue on  
“Model Predictive Control (MPC) under Disturbances and Uncertainties: Safety, Stability  
and Learning”

The paper outlines and presents the basic ideas and concepts behind a hierarchical approach for combined planning and control for autonomous systems with guarantees despite disturbances. We believe that the paper is of interest for the readers of the special issue and nicely fits the topics considered.

Thus, we would be very happy to get it include in the special issue.

Kind regards

Rolf Findeisen in the name of all authors
