

Traditional Regularization

$$R = \text{dist}(\text{blue}, \text{yellow}) + \text{dist}(\text{blue}, \text{green}) + \dots + \text{dist}(\text{green}, \text{red})$$

Our Regularization

$$R = \text{dist}(\text{mixture 1}, \text{mixture 2})$$

New random mixtures at each step

$$\text{Loss} = \mathcal{L}(\text{blue}, \text{yellow}, \text{green}, \dots, \text{red}) + \lambda \cdot R$$
