

# criterion performance measurements

## overview

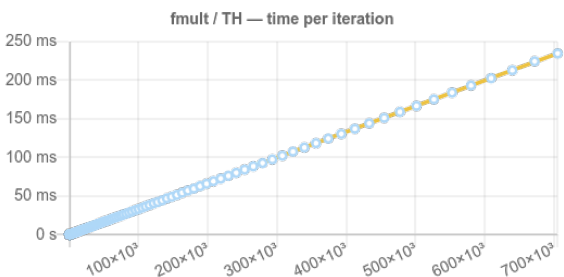

## fmult / TH

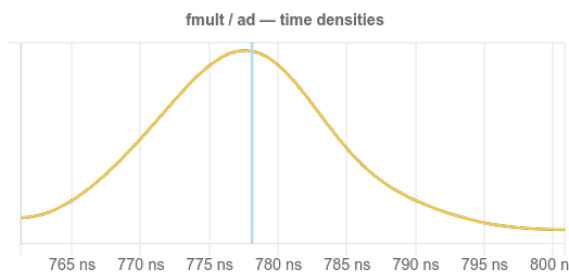

lower bound estimate upper bound

|                                |         |        |        |
|--------------------------------|---------|--------|--------|
| OLS regression                 | 332 ns  | 332 ns | 333 ns |
| R <sup>2</sup> goodness-of-fit | 1.00    | 1.00   | 1.00   |
| Mean execution time            | 332 ns  | 332 ns | 333 ns |
| Standard deviation             | 85.9 ps | 218 ps | 462 ps |

Outlying measurements have no (0.426%) effect on estimated standard deviation.

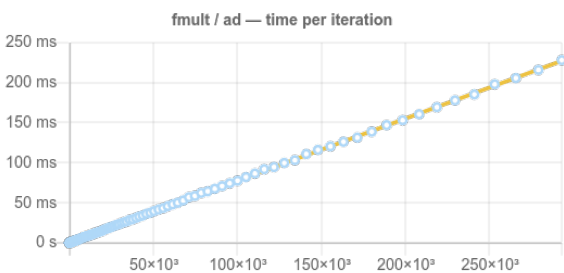

## fmult / ad

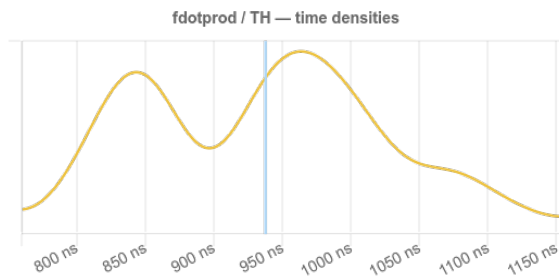

lower bound estimate upper bound

|                                |         |         |         |
|--------------------------------|---------|---------|---------|
| OLS regression                 | 773 ns  | 775 ns  | 777 ns  |
| R <sup>2</sup> goodness-of-fit | 1.00    | 1.00    | 1.00    |
| Mean execution time            | 776 ns  | 778 ns  | 780 ns  |
| Standard deviation             | 5.25 ns | 6.72 ns | 8.60 ns |

Outlying measurements have a slight (3.32%) effect on estimated standard deviation.

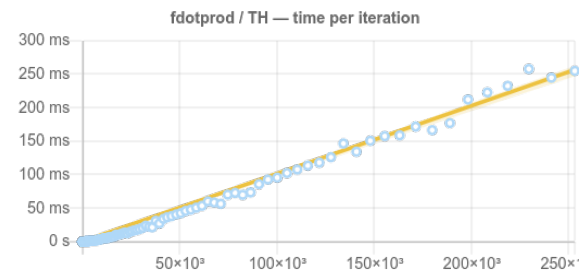

## fdotprod / TH

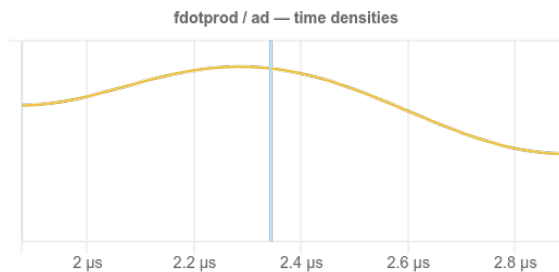

**lower bound estimate upper bound**

|                                |         |              |              |
|--------------------------------|---------|--------------|--------------|
| OLS regression                 | 980 ns  | 1.01 $\mu$ s | 1.04 $\mu$ s |
| R <sup>2</sup> goodness-of-fit | 0.988   | 0.992        | 0.994        |
| Mean execution time            | 912 ns  | 938 ns       | 965 ns       |
| Standard deviation             | 73.7 ns | 86.0 ns      | 102 ns       |

Outlying measurements have a severe (87.1%) effect on estimated standard deviation.

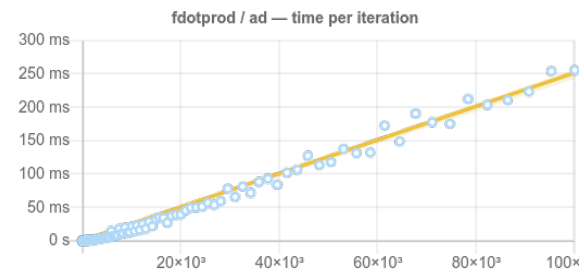

## fdotprod / ad

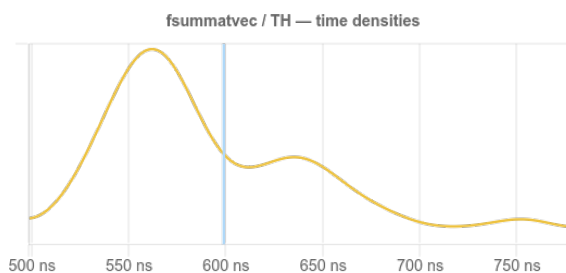

**lower bound estimate upper bound**

|                                |              |              |              |
|--------------------------------|--------------|--------------|--------------|
| OLS regression                 | 2.43 $\mu$ s | 2.51 $\mu$ s | 2.57 $\mu$ s |
| R <sup>2</sup> goodness-of-fit | 0.986        | 0.990        | 0.994        |
| Mean execution time            | 2.26 $\mu$ s | 2.34 $\mu$ s | 2.41 $\mu$ s |
| Standard deviation             | 200 ns       | 236 ns       | 277 ns       |

Outlying measurements have a severe (88.0%) effect on estimated standard deviation.

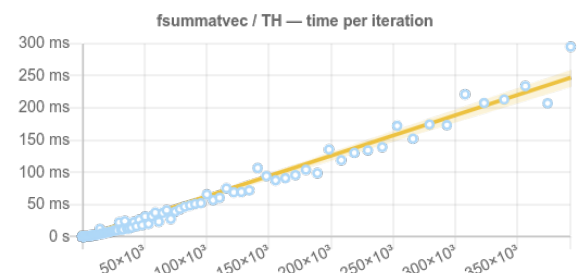

## fsummatvec / TH

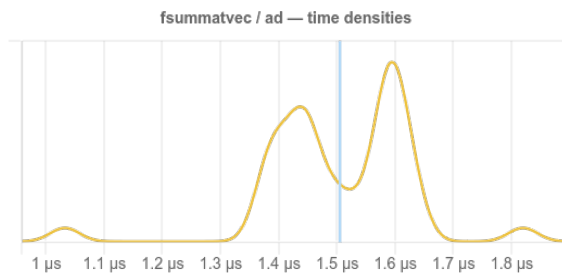

**lower bound estimate upper bound**

|                                |         |         |         |
|--------------------------------|---------|---------|---------|
| OLS regression                 | 595 ns  | 629 ns  | 662 ns  |
| R <sup>2</sup> goodness-of-fit | 0.978   | 0.984   | 0.991   |
| Mean execution time            | 584 ns  | 599 ns  | 620 ns  |
| Standard deviation             | 46.6 ns | 59.3 ns | 75.9 ns |

Outlying measurements have a severe (89.1%) effect on estimated standard deviation.

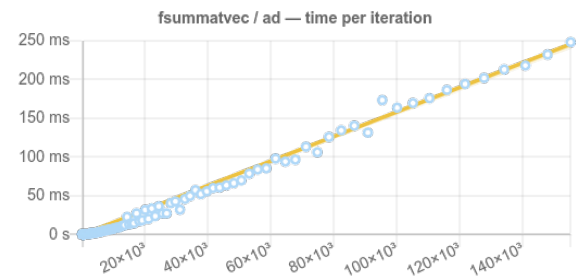

## fsummatvec / ad

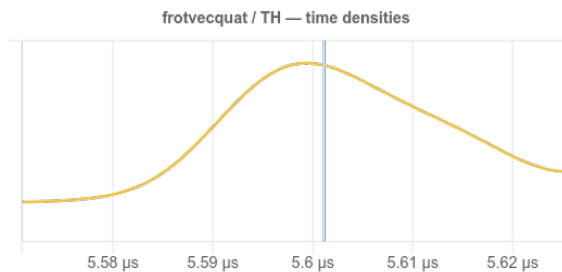

**lower bound estimate upper bound**

|                                |              |              |              |
|--------------------------------|--------------|--------------|--------------|
| OLS regression                 | 1.55 $\mu$ s | 1.58 $\mu$ s | 1.61 $\mu$ s |
| R <sup>2</sup> goodness-of-fit | 0.989        | 0.993        | 0.996        |
| Mean execution time            | 1.46 $\mu$ s | 1.50 $\mu$ s | 1.54 $\mu$ s |
| Standard deviation             | 92.0 ns      | 125 ns       | 191 ns       |

Outlying measurements have a severe (84.4%) effect on estimated standard deviation.

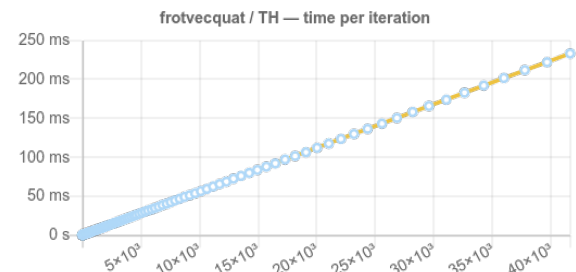

## frotvecquat / TH

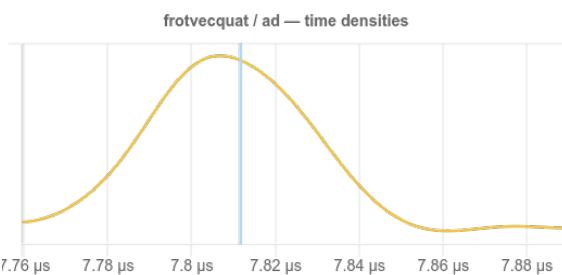

**lower bound estimate upper bound**

|                                |              |              |              |
|--------------------------------|--------------|--------------|--------------|
| OLS regression                 | 5.60 $\mu$ s | 5.60 $\mu$ s | 5.60 $\mu$ s |
| R <sup>2</sup> goodness-of-fit | 1.00         | 1.00         | 1.00         |
| Mean execution time            | 5.60 $\mu$ s | 5.60 $\mu$ s | 5.60 $\mu$ s |
| Standard deviation             | 9.57 ns      | 11.5 ns      | 14.3 ns      |

Outlying measurements have no (0.565%) effect on estimated standard deviation.

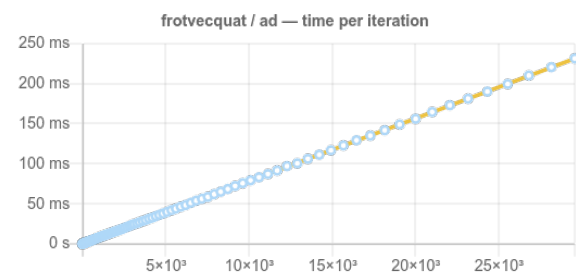

## frotvecquat / ad

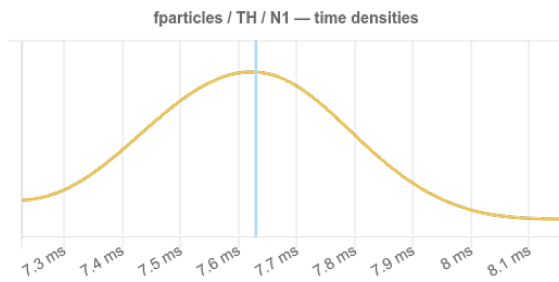

**lower bound estimate upper bound**

|                                |              |              |              |
|--------------------------------|--------------|--------------|--------------|
| OLS regression                 | 7.81 $\mu$ s | 7.81 $\mu$ s | 7.82 $\mu$ s |
| R <sup>2</sup> goodness-of-fit | 1.00         | 1.00         | 1.00         |
| Mean execution time            | 7.81 $\mu$ s | 7.81 $\mu$ s | 7.82 $\mu$ s |
| Standard deviation             | 16.1 ns      | 21.7 ns      | 28.5 ns      |

Outlying measurements have no (0.588%) effect on estimated standard deviation.

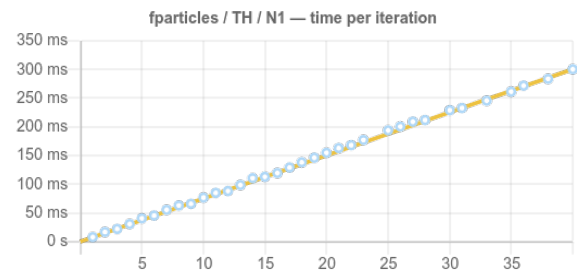

## fparticles / TH / N1

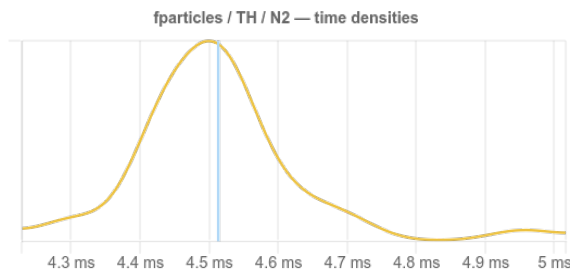

**lower bound estimate upper bound**

|                                |             |             |             |
|--------------------------------|-------------|-------------|-------------|
| OLS regression                 | 7.44 ms     | 7.50 ms     | 7.59 ms     |
| R <sup>2</sup> goodness-of-fit | 0.999       | 0.999       | 1.00        |
| Mean execution time            | 7.58 ms     | 7.63 ms     | 7.69 ms     |
| Standard deviation             | 130 $\mu$ s | 165 $\mu$ s | 221 $\mu$ s |

Outlying measurements have a slight (4.68%) effect on estimated standard deviation.

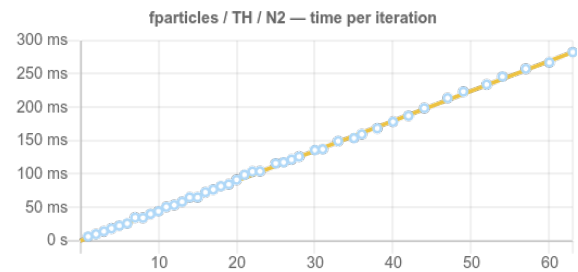

## fparticles / TH / N2

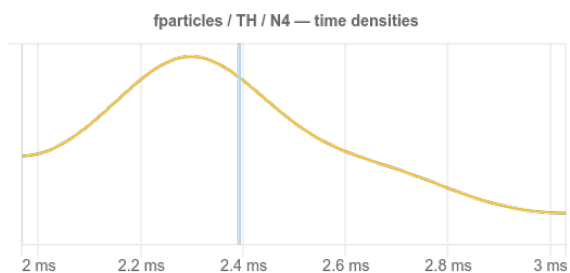

**lower bound estimate upper bound**

|                                |              |             |             |
|--------------------------------|--------------|-------------|-------------|
| OLS regression                 | 4.45 ms      | 4.48 ms     | 4.51 ms     |
| R <sup>2</sup> goodness-of-fit | 0.999        | 0.999       | 1.00        |
| Mean execution time            | 4.48 ms      | 4.51 ms     | 4.55 ms     |
| Standard deviation             | 78.5 $\mu$ s | 113 $\mu$ s | 176 $\mu$ s |

Outlying measurements have a moderate (10.8%) effect on estimated standard deviation.

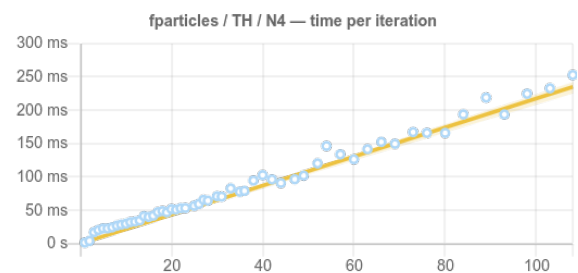

## fparticles / TH / N4

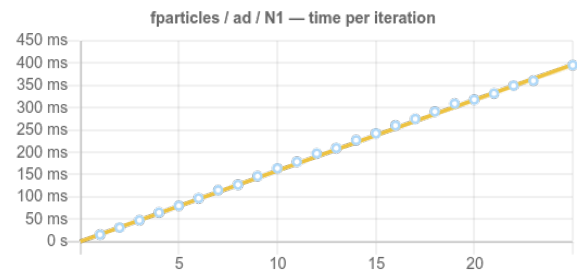

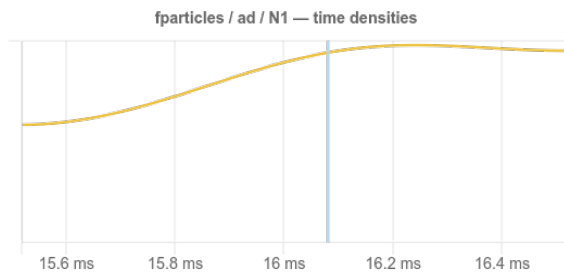

**lower bound estimate upper bound**

|                                |             |             |             |
|--------------------------------|-------------|-------------|-------------|
| OLS regression                 | 2.09 ms     | 2.17 ms     | 2.25 ms     |
| R <sup>2</sup> goodness-of-fit | 0.980       | 0.988       | 0.994       |
| Mean execution time            | 2.32 ms     | 2.39 ms     | 2.46 ms     |
| Standard deviation             | 191 $\mu$ s | 232 $\mu$ s | 282 $\mu$ s |

Outlying measurements have a severe (65.3%) effect on estimated standard deviation.

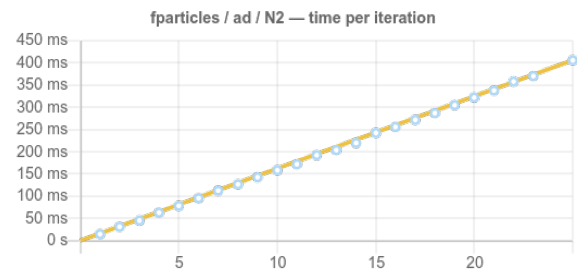

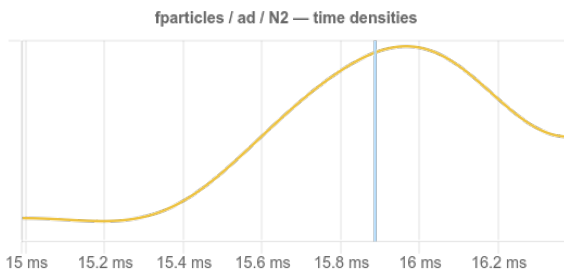

## fparticles / ad / N1

|                                | lower bound | estimate    | upper bound |
|--------------------------------|-------------|-------------|-------------|
| OLS regression                 | 15.6 ms     | 15.8 ms     | 16.1 ms     |
| R <sup>2</sup> goodness-of-fit | 0.999       | 0.999       | 1.00        |
| Mean execution time            | 16.0 ms     | 16.1 ms     | 16.2 ms     |
| Standard deviation             | 196 $\mu$ s | 239 $\mu$ s | 318 $\mu$ s |

Outlying measurements have a slight (3.99%) effect on estimated standard deviation.

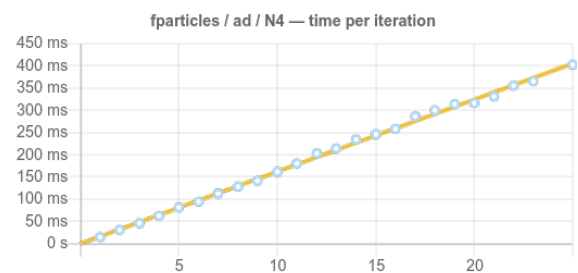

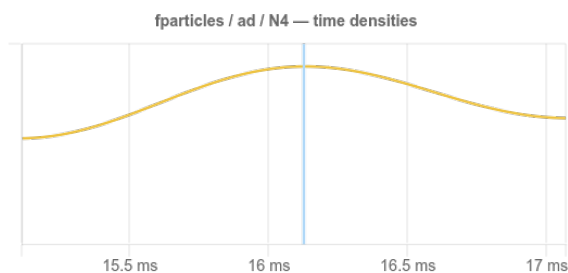

## fparticles / ad / N2

|                                | lower bound | estimate    | upper bound |
|--------------------------------|-------------|-------------|-------------|
| OLS regression                 | 16.1 ms     | 16.2 ms     | 16.3 ms     |
| R <sup>2</sup> goodness-of-fit | 0.999       | 1.00        | 1.00        |
| Mean execution time            | 15.8 ms     | 15.9 ms     | 16.0 ms     |
| Standard deviation             | 185 $\mu$ s | 259 $\mu$ s | 404 $\mu$ s |

Outlying measurements have a slight (3.99%) effect on estimated standard deviation.

## fparticles / ad / N4

|                                | lower bound | estimate    | upper bound |
|--------------------------------|-------------|-------------|-------------|
| OLS regression                 | 15.9 ms     | 16.2 ms     | 16.6 ms     |
| R <sup>2</sup> goodness-of-fit | 0.996       | 0.998       | 0.999       |
| Mean execution time            | 15.9 ms     | 16.1 ms     | 16.3 ms     |
| Standard deviation             | 355 $\mu$ s | 442 $\mu$ s | 564 $\mu$ s |

Outlying measurements have a slight (7.73%) effect on estimated standard deviation.

# understanding this report

In this report, each function benchmarked by criterion is assigned a section of its own.

- The chart on the left is a [kernel density estimate](#) (also known as a KDE) of time measurements. This graphs the probability of any given time measurement occurring. A spike indicates that a measurement of a particular time occurred; its height indicates how often that measurement was repeated.
- The chart on the right is the raw data from which the kernel density estimate is built. The x-axis indicates the number of loop iterations, while the y-axis shows measured execution time for the given number of loop iterations. The line behind the values is the linear regression estimate of execution time for a given number of iterations. Ideally, all measurements will be on (or very near) this line. The transparent area behind it shows the confidence interval for the execution time estimate.

Under the charts is a small table. The first two rows are the results of a linear regression run on the measurements displayed in the right-hand chart.

- *OLS regression* indicates the time estimated for a single loop iteration using an ordinary least-squares regression model. This number is more accurate than the *mean* estimate below it, as it more effectively eliminates measurement overhead and other constant factors.
- $R^2$ ; *goodness-of-fit* is a measure of how accurately the linear regression model fits the observed measurements. If the measurements are not too noisy,  $R^2$  should lie between 0.99 and 1, indicating an excellent fit. If the number is below 0.99, something is confounding the accuracy of the linear model.
- *Mean execution time* and *standard deviation* are statistics calculated from execution time divided by number of iterations.

We use a statistical technique called the [bootstrap](#) to provide confidence intervals on our estimates. The bootstrap-derived upper and lower bounds on estimates let you see how accurate we believe those estimates to be.

A noisy benchmarking environment can cause some or many measurements to fall far from the mean. These outlying measurements can have a significant inflationary effect on the estimate of the standard deviation. We calculate and display an estimate of the extent to which the standard deviation has been inflated by outliers.

## colophon

This report was created using the [criterion](#) benchmark execution and performance analysis tool.

Criterion is developed and maintained by [Bryan O'Sullivan](#).
