**Table 1.** Comparison of training seconds per image on three different sized images. Our method was comparable to the end-to-end (E2E) training.

Image size	8698 × 7496	12223 × 10057	23849 × 10257
E2E	1.6s	2.6s	/
Ours (K=4)	1.6s	3.1s	6.6s
Ours (K=8)	2.2s	4.2s	8.8s

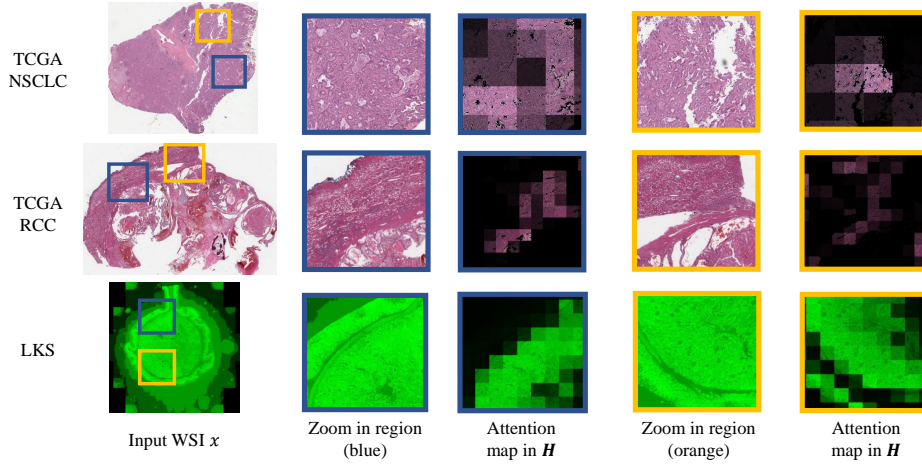

**Table 2.** Network structures of the reconstruction network  $R_i$ , the auxiliary classifier  $G_i$  and the classifier  $H$ .

Reconstruction $R_i$	Auxiliary classifier $G_i$	Classifier $H$
Bilinear interpolation	Conv2d(kernel_size, stride)	Conv2d(5 × 5, 5 × 5)
Conv2d(3x3, 1x1)	LayerNorm + ReLU	LayerNorm + ReLU
BatchNorm + ReLU	GABMIL pooling	GABMIL pooling
Conv2d(3x3, 1x1)	Linear(NO. features, 128)	Linear(512, 128)
	ReLU	ReLU
	Linear(128, NO. classes)	Linear(128, NO. classes)

**Table 3.** Hyper-parameters used in our experiments. kernel\_size and stride are the corresponding values in Table 2.

Network		RFR model $U_i$		Classifier $A_i$	
Hyper-parameters		No. patches	Patch size	kernel_size	stride
K=4	$G_1$	10	128	$9 \times 9$	$9 \times 9$
	$G_2$	10	64	$9 \times 9$	$9 \times 9$
	$G_3$	10	32	$7 \times 7$	$7 \times 7$
K=8	$G_1 \sim G_3$	10	128	$9 \times 9$	$9 \times 9$
	$G_4 \sim G_5$	10	64	$9 \times 9$	$9 \times 9$
	$G_6 \sim G_7$	10	32	$7 \times 7$	$7 \times 7$

**Fig. 1.** Attention visualization of the GABMIL in the classifier  $H(\cdot)$ . As the entire image was too large, we picked two regions on each image and showed their local region and attention maps.
