

## Problem Space

Advanced movement analytics  
Trajectories  
Object state and behavior  
Manufacturing

## Applications

Workflow Evaluation	Frequent Paths
Collision Avoidance	Trajectory Patterns
Space Modelling	Event Detection

## Industry

Commercial Systems  
Digital Twins  
Industrial Applications

## Methods in Scope

Indoor / Any Location  
Manufacturing / Other Industries  
Movement / Movement Related

## Fundamental Techniques

Neural Networks Based Sequence Models	Trajectory Preprocessing
Probabilistic Transition Systems	Constraint Optimisation
Classical Logic and Knowledge Representation	Integration of ML and Logic
