

1 Decompose the task into subtasks
Subtasks should be independently meaningful so that they can be evaluated on their own

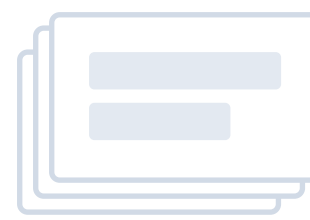

DECOMPOSE INTO SUBTASKS

2 Run the decomposition across multiple inputs
For example, research papers for which gold-standard results are available

PAPERS

RESULTS

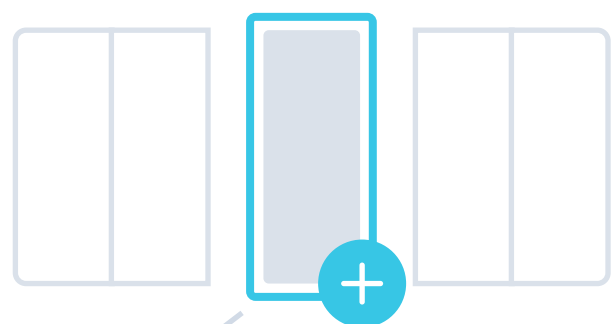

VS.

GOLD STANDARDS

3 Evaluate the results
Either manually or automatically using metrics such as accuracy and F1-score

5 Improve failing subtasks
Using further decomposition (e.g. adding chain-of-thought, retrieval steps) or custom code (e.g. prompt edits)

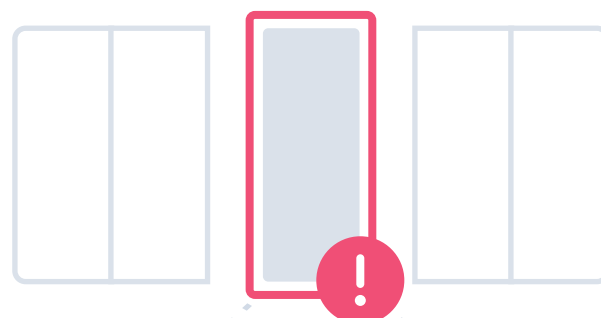

DECOMPOSITION

CUSTOM
CODE EDITS

EVALUATE FAILED SUBTASKS

INPUTS

OUTPUTS

4 Inspect failing subtasks
Zoom in on failures using the ICE trace visualizer to inspect the inputs and outputs of each subtask
