

INPUT

What were the experiments, trial arms, and adherence for each arm in Bloom et al. 2016?

METHODS

- **Baseline:** Select-and-generate like Elicit
- **Improving selection**
 - Fine-tuned classifiers
 - Task-specific prompting
 - Zero-shot perplexity classifier
 - Pruning
- **Improving generation**
 - Decontextualization
 - Auto-few-shot demonstrations

OUTPUT

Experiments

- **Fall experiment**
 - **Arms**
 - **Park walking**
 - Adherence: 72% of the participants in the intervention groups engaged in relaxation or park walking during their lunch break at least 8 times. On average, they engaged in relaxation/park walking 8.6 out of 10 times during the intervention period.
 - **Relaxation exercises**
 - Adherence: same as for park walking
 - **Control**
 - Adherence: not mentioned
- **Spring experiment**
 - **Arms**
 - **Park walking**
 - Adherence: 76% of the participants in the intervention groups engaged in relaxation or park walking during their lunch break at least 8 times. On average, they engaged in relaxation/park walking 8.5 out of 10 times during the intervention period.
 - **Relaxation exercises**
 - Adherence: same as for park walking
 - **Control**
 - Adherence: not mentioned
