

<b>Order</b>	<b>Question</b>	<b>Component</b>	<b>Scope</b>
1	Who is involved in this project? e.g. researchers, organizations, end users	transparency	agents
2	What the outputs or deliverables of the project are? e.g. types of data to collect/re-use, models or algorithms	transparency	objects
3	What tools or processes make those outputs or deliverables (including data science lifecycle and project planning)? e.g. data collection, cleaning, data management	transparency	process
4	What outcomes and impacts the project will have in the world? What are the intended aims of the project? What is the intended impact?	transparency	impact
5	Have all the humans involved in the project been identified? This includes data scientists, downstream users of data science objects, & data subjects (e.g., patients). Are there formal agreements or explicitly described relationships between them? Examples of formal agreements: employment contracts (specifically length of contract, percentage of work, employee classifications, & other characteristics that might interact with ACCOUNTABILITY), consent forms, ethical approvals, intellectual property protocols, patents, non-disclosure agreements, contracts governing engagements	transparency	agents
6	Are these formal agreements accessible by all of the actors?	transparency	agents
7	Have the contributions of the humans who are involved been described?	transparency	agents
8	Are there mechanisms in place to mitigate potential conflicts?	transparency	agents
9	Is there a provision for continuity and sustainability of the project and its resources over time? (e.g., do contact emails go to institutional email addresses, not individuals'?)	transparency	agents
10	Have all data/metadata/algorithms been described [this may be a link to a document]	transparency	objects
11	How will you make data and algorithms you used in the analysis transparent?	transparency	objects
12	How will you make data and algorithms that you used in the analysis accessible to others? (such as following the FAIR principles, meeting Open Science guidelines)	transparency	objects
13	Is any metadata given for the dataset?	transparency	objects
14	Which algorithms/tools were used for analysis (if known)?	transparency	objects
15	Are your data and metadata in a repository? (provide links such as Github, Zenodo etc.)	transparency	objects
16	Are the data and metadata publicly available?	transparency	objects
17	What is the licence associated with the data?	transparency	objects
18	What is the quality of the data?	transparency	objects
19			

20	What is the quantity of missing values in the data?	transparency	objects
21	Are there any terms and conditions specified on the use of the data/algorithm?	transparency	objects
22	How will you collect the data?	transparency	process
23	How do you clean/preprocess the data?	transparency	process
24	How do you analyze the data?	transparency	process
25	Are all of the goals of the project accessible and understandable by all of the actors?	transparency	process
26	How do you maintain/serve the project or your data?	transparency	process
27	Within subcomponents of a process, are data FAIR?	transparency	impact
28	Can you describe the implications of the project so that it is understandable by everyone?	transparency	impact
29	Can you articulate how this project will affect people's life or research?	transparency	impact
30	Have you described how this project might be misused?	transparency	impact
31	Are there any terms and conditions specified on the use of data/algorithm?	transparency	impact
32	Is there an informed consent form signed by the human subjects in the project?	privacy	agents
33	Has a confidentiality agreement or non disclosure agreement been signed (if applicable)?	privacy	agents
34	Has a data usage agreement been signed by the researchers involved?	privacy	agents
35	Has a privacy protection method been used to make the data anonymous or pseudonymous?	privacy	objects
36	Are you collecting identifiable personal information?	privacy	objects
37	Are you collecting sensitive data (as defined by GDPR)	privacy	objects
38	Are the data you collected necessary to answer your research questions?	privacy	objects
39	Where/how do you process the data? (do you upload data to some servers to execute processing? Which tools do you use?)	privacy	objects
40	Where do you store data during and after your project?	privacy	objects
41	Is it secure?	privacy	objects
42	Did you do your data management plan or use a template (such as <a href="https://dmponline.dcc.ac.uk/">https://dmponline.dcc.ac.uk/</a> )?	privacy	objects
43	Can third parties use the data? if so, how?	privacy	objects
44	Do your models and results reveal personal information directly?	privacy	objects
45	Can the outcome can be used to identify individuals indirectly?	privacy	objects

46	Is it possible that other people can combine your model/algorithm with other resources to identify individuals?	privacy	objects
47	Do participants have full control over their data?	privacy	objects
48	Can they withdraw from the study at any point in time?	privacy	objects
49	Can they provide consent for secondary re-use of the data?	privacy	objects
50	Has a distributed learning method, such as the personal health train, been used where the algorithm is sent to the data provider and not the other way around?	privacy	process
51	Has the analysis been conducted on the individual or on the group level?	privacy	process
52	Has an information management system been set in place for auditing purposes?	privacy	process
53	Does your project help individuals protect their privacy and confidentiality?	privacy	impact
54	Does your project increase society's confidence and trust in data science projects?	privacy	impact
55	Will your outcome deliver a positive message to people about how their privacy and confidentiality have been handled?	privacy	impact
56	Has the researcher signed a code of conduct agreement?	accountability	agents
57	Is it clear who is responsible for which part of the analysis outcome?	accountability	agents
58	Does your organisation have protocols and procedures for dealing with an intentional or unintentional breakdown of transparency, privacy/confidentiality, or norm breaking?	accountability	agents
59	Are there protocols and procedures for dealing with conflicts between legal and ethical positions in projects?	accountability	agents
60	Does your organisation have a data protection officer? Data ethics review committees? Data stewards?	accountability	agents
61	Do employees have access to resources (e.g., training) for doing responsible data science?	accountability	agents
62	Do protections exist against lawsuit or damages for individual data scientists, users, or organisations?	accountability	agents
63	Has provenance been presented to track the origin of the data?	accountability	objects
64	Do you know the original permissions attached to the data (in the case of re-use)?	accountability	objects
65	Are you following the original permissions that are attached to that data?	accountability	objects
66	Is there a description provided about potential biases, such as confounding factors?	accountability	objects
67	Is data quality an issue? If yes, what is the specific issue and how is it resolved?	accountability	objects
68	Is there a threshold for missing values? Is there a mechanism for reacting to missed thresholds?	accountability	objects
69	Is there a clear and transparent description of the process that is accessible?	accountability	process

70	Who is responsible for which part of the analysis?	accountability	process
71	Is there any control/checkpoints within the process?	accountability	process
72	What is the impact or the outcome of the analysis?	accountability	impact
73	Is the outcome of your project understandable by others?	accountability	impact
74	How are unintended outcomes communicated to the relevant organisation?	accountability	impact
75	Are there protocols and procedures for dealing with conflicts between legal and ethical positions in projects?	accountability	impact
76	Is there a procedure for dealing with unintended outcomes, either positive or negative?	accountability	impact
77	How does your organisation deal with evaluations by external parties about the responsibility aspects of the project?	accountability	impact
78	What are the operative social values and norms that touch on who is involved in the project and how their roles are governed?	societal values	agents
79	What are the operative social values and norms that touch on data, algorithms, and other outputs or deliverables of the project?	societal values	objects
80	What are the operative social values and norms that touch on research processes and the data science lifecycle?	societal values	process
81	What are the operative social values and norms that touch on the intended and unintended consequences and outcomes of your project?	societal values	impact
82	Do the operative social values and norms conflict with each other?	societal values	impact
83	Are all of the operative social values and norms in agreement with each other?	societal values	impact
