Factorized LS-THC-MP3 equations

The notation used here is the same as in the main text, except that we disambiguate the core matrix \mathbf{V} based on which collocation matrices are applied; for example $\mathbf{V}^{(pqrs)}$ is the specific core matrix indicated by $X_p^R X_r^R V_{RS} X_q^S X_s^S$. Including the various spin cases, this leads to a total of 13 distinct core matrices,

$$V_{RS}^{(ijkl)} \rightarrow V_{RS}, \quad V_{R\bar{S}}^{(ij\bar{k}\bar{l})} \rightarrow V_{R\bar{S}}, \quad V_{\bar{R}\bar{S}}^{(\bar{i}\bar{j}\bar{k}\bar{l})} \rightarrow V_{\bar{R}\bar{S}} \quad (1)$$

$$V_{RS}^{(abij)} \rightarrow \tilde{V}_{RS}, \quad V_{R\bar{S}}^{(a\bar{b}i\bar{j})} \rightarrow \tilde{V}_{R\bar{S}}, \quad V_{\bar{R}\bar{S}}^{(\bar{a}\bar{b}i\bar{j})} \rightarrow \tilde{V}_{\bar{R}\bar{S}} \quad (2)$$

$$V_{RS}^{(abcd)} \rightarrow \tilde{\tilde{V}}_{RS}, \quad V_{R\bar{S}}^{(a\bar{b}c\bar{d})} \rightarrow \tilde{\tilde{V}}_{R\bar{S}}, \quad V_{\bar{R}\bar{S}}^{(\bar{a}\bar{b}c\bar{d})} \rightarrow \tilde{\tilde{V}}_{\bar{R}\bar{S}} \quad (3)$$

$$V_{RS}^{(aibj)} \rightarrow \bar{V}_{RS}, \quad V_{R\bar{S}}^{(a\bar{i}b\bar{j})} \rightarrow \bar{V}_{R\bar{S}}, \quad V_{\bar{R}\bar{S}}^{(\bar{a}i\bar{b}j)} \rightarrow \bar{V}_{\bar{R}\bar{S}}, \quad V_{\bar{R}\bar{S}}^{(\bar{a}\bar{i}\bar{b}\bar{j})} \rightarrow \bar{V}_{\bar{R}\bar{S}} \quad (4)$$

Note that for the $ijkl$, $abij$, and $abcd$ distributions the mixed spin cases are symmetrically defined, e.g. $\tilde{V}_{\bar{R}\bar{S}} = \tilde{V}_{S\bar{R}}$.

The factorized equations for the LS-THC-MP3b energy correction utilize the following

intermediates,

$$P_{ij}^R = \sum_S V_{RS} X_i^S X_j^S, \quad P_{ij}^{\bar{R}} = \sum_S V_{\bar{R}S} X_i^S X_j^S, \quad (5)$$

$$P_{ij}^{\bar{R}} = \sum_{\bar{S}} V_{R\bar{S}} X_i^{\bar{S}} X_j^{\bar{S}}, \quad P_{ij}^{\bar{R}} = \sum_{\bar{S}} V_{\bar{R}\bar{S}} X_i^{\bar{S}} X_j^{\bar{S}} \quad (6)$$

$$\tilde{P}_{ai}^R = \sum_S \tilde{V}_{RS} \tilde{X}_a^S \tilde{X}_i^S, \quad \tilde{P}_{ai}^{\bar{R}} = \sum_S \tilde{V}_{\bar{R}S} \tilde{X}_a^S \tilde{X}_i^S, \quad (7)$$

$$\tilde{P}_{\bar{a}\bar{i}}^R = \sum_{\bar{S}} \tilde{V}_{R\bar{S}} \tilde{X}_a^{\bar{S}} \tilde{X}_i^{\bar{S}}, \quad \tilde{P}_{\bar{a}\bar{i}}^{\bar{R}} = \sum_{\bar{S}} \tilde{V}_{\bar{R}\bar{S}} \tilde{X}_a^{\bar{S}} \tilde{X}_i^{\bar{S}} \quad (8)$$

$$\bar{P}_{ij}^R = \sum_S \bar{V}_{RS} X_i^S X_j^S, \quad \bar{P}_{ij}^{\bar{R}} = \sum_S \bar{V}_{\bar{R}S} X_i^S X_j^S, \quad (9)$$

$$\bar{P}_{ij}^{\bar{R}} = \sum_{\bar{S}} \bar{V}_{R\bar{S}} X_i^{\bar{S}} X_j^{\bar{S}}, \quad \bar{P}_{ij}^{\bar{R}} = \sum_{\bar{S}} \bar{V}_{\bar{R}\bar{S}} X_i^{\bar{S}} X_j^{\bar{S}} \quad (10)$$

$$\tilde{\tilde{P}}_{ai}^R = \sum_S \tilde{\tilde{V}}_{RS} \tilde{\tilde{X}}_a^S \tilde{\tilde{X}}_i^S, \quad \tilde{\tilde{P}}_{ai}^{\bar{R}} = \sum_S \tilde{\tilde{V}}_{\bar{R}S} \tilde{\tilde{X}}_a^S \tilde{\tilde{X}}_i^S, \quad (11)$$

$$\tilde{\tilde{P}}_{\bar{a}\bar{i}}^R = \sum_{\bar{S}} \tilde{\tilde{V}}_{R\bar{S}} \tilde{\tilde{X}}_a^{\bar{S}} \tilde{\tilde{X}}_i^{\bar{S}}, \quad \tilde{\tilde{P}}_{\bar{a}\bar{i}}^{\bar{R}} = \sum_{\bar{S}} \tilde{\tilde{V}}_{\bar{R}\bar{S}} \tilde{\tilde{X}}_a^{\bar{S}} \tilde{\tilde{X}}_i^{\bar{S}} \quad (12)$$

$$Q_{ai}^R = \sum_S T_{RS}^{[1]} \tilde{X}_a^S \tilde{X}_i^S, \quad Q_{ai}^{\bar{R}} = \sum_S T_{\bar{R}S}^{[1]} \tilde{X}_a^S \tilde{X}_i^S, \quad (13)$$

$$Q_{\bar{a}\bar{i}}^R = \sum_{\bar{S}} T_{R\bar{S}}^{[1]} \tilde{X}_a^{\bar{S}} \tilde{X}_i^{\bar{S}}, \quad Q_{\bar{a}\bar{i}}^{\bar{R}} = \sum_{\bar{S}} T_{\bar{R}\bar{S}}^{[1]} \tilde{X}_a^{\bar{S}} \tilde{X}_i^{\bar{S}} \quad (14)$$

$$WXX^{QU} = \sum_P T_{QP}^{[1]} \left(\left(\sum_a X_a^P X_a^U \right) \left(\sum_i X_i^P X_i^U \right) \right) \quad (15)$$

$$WXX^{Q\bar{U}} = \sum_{\bar{P}} T_{Q\bar{P}}^{[1]} \left(\left(\sum_a X_a^{\bar{P}} X_a^{\bar{U}} \right) \left(\sum_i X_i^{\bar{P}} X_i^{\bar{U}} \right) \right) \quad (16)$$

$$WXX^{\bar{Q}U} = \sum_P T_{\bar{Q}P}^{[1]} \left(\left(\sum_a X_a^P X_a^U \right) \left(\sum_i X_i^P X_i^U \right) \right) \quad (17)$$

$$WXX^{\bar{Q}\bar{U}} = \sum_{\bar{P}} T_{\bar{Q}\bar{P}}^{[1]} \left(\left(\sum_a X_a^{\bar{P}} X_a^{\bar{U}} \right) \left(\sum_i X_i^{\bar{P}} X_i^{\bar{U}} \right) \right) \quad (18)$$

$$VXX^{SQ} = \sum_R V_{RS} \left(\sum_e X_e^R X_e^Q \right) \left(\sum_m X_m^R X_m^Q \right) \quad (19)$$

$$VXX^{S\bar{Q}} = \sum_{\bar{R}} V_{\bar{R}S} \left(\sum_e X_e^{\bar{R}} X_e^{\bar{Q}} \right) \left(\sum_m X_m^{\bar{R}} X_m^{\bar{Q}} \right) \quad (20)$$

$$VXX^{\bar{S}Q} = \sum_R V_{R\bar{S}} \left(\sum_e X_e^R X_e^Q \right) \left(\sum_m X_m^R X_m^Q \right) \quad (21)$$

$$VXX^{\bar{S}\bar{Q}} = \sum_{\bar{R}} V_{\bar{R}\bar{S}} \left(\sum_e X_e^{\bar{R}} X_e^{\bar{Q}} \right) \left(\sum_m X_m^{\bar{R}} X_m^{\bar{Q}} \right) \quad (22)$$

The LS-THC-MP3b energy itself is term-by-term,

$$E_{PPC} = \frac{1}{2} \sum_{Ubj} \left(\sum_S \left(\sum_Q \left(\sum_e \left(\sum_a \tilde{P}_{ae}^S \tilde{X}_a^U \right) \left(\sum_i Q_{ei}^P \tilde{X}_i^U \right) \right) \left(\sum_f \tilde{X}_f^S \tilde{X}_f^Q \right) \tilde{X}_j^Q \right) \tilde{X}_b^S \right) Q_{bj}^U \quad (23)$$

$$+ \frac{1}{2} \sum_{Ubj} \left(\sum_{\bar{S}} \left(\sum_{\bar{Q}} \left(\sum_e \left(\sum_a \tilde{P}_{ae}^{\bar{S}} \tilde{X}_a^U \right) \left(\sum_i Q_{ei}^P \tilde{X}_i^U \right) \right) \left(\sum_f \tilde{X}_f^{\bar{S}} \tilde{X}_f^{\bar{Q}} \right) \tilde{X}_j^{\bar{Q}} \right) \tilde{X}_b^{\bar{S}} \right) Q_{bj}^U \quad (24)$$

$$+ \frac{1}{2} \sum_{\bar{U}} \bar{b}\bar{j} \left(\sum_S \left(\sum_Q \left(\sum_{\bar{e}} \left(\sum_{\bar{a}} \tilde{P}_{\bar{a}\bar{e}}^S \tilde{X}_{\bar{a}}^{\bar{U}} \right) \left(\sum_i Q_{\bar{e}i}^P \tilde{X}_i^{\bar{U}} \right) \right) \left(\sum_f \tilde{X}_f^S \tilde{X}_f^Q \right) \tilde{X}_j^Q \right) \tilde{X}_b^S \right) Q_{bj}^{\bar{U}} \quad (25)$$

Molecular Dynamics

To get the proper water solvation shell of 2H-2-azabicyclo[1.1.1]pentane, quantum mechanics/molecular mechanics (QM/MM) simulation was performed. The force field of 2-azabicyclo[1.1.1]pentane was generated by CgenFF tool.¹ The solute was first optimized at the B3LYP/def2-TZVP level **with dispersion correction** and was put in a sphere non-periodic water box of TIP3P waters with a minimum distance of 15 Angstrom between the box boundary and the solute. CHARMM with the CHARMM 36 force field² was used for 5000 steps of energy minimization to remove bad contacts and clashes. Semi-empirical QM/MM setup scheme^{3,4} was adopted as the unavailability of accurate classical potentials for 2-azabicyclo[1.1.1]pentane. The semi-empirical QM potential, third-order Density Functional Tight Binding with 30b parameter set (DFTB3/3ob),⁵ was used for the 2-azabicyclo[1.1.1]pentane. The rest of the system was modeled by the TIP3P water model. Simulations were integrated at 1.5 fs time steps. The SHAKE algorithm was applied to constrain the solvent molecules as rigid bodies. The nonbonding interaction cut-off was set at 12 Angstrom. 5000 steps of minimization, 30 ps of heating, 30 ps of equilibration, and finally a 300 ps production dynamic was performed using the hybrid DFTB3/3ob:CHARMM potential.⁵ Then the last well-equilibrated

configuration was used to pick the water solvation shell. The closest 11 water molecules were selected and indexed by distance to 2-azabicyclo[1.1.1] pentane.
