

```

1 User:
2 Given the definition of Church numerals:
3 type 'b church = 'b -> ('b -> 'b) -> 'b
4
5 Implement the functions:
6 to_int : int church -> int : to convert a church
7 numeral into an integer. This function will be
8 especially helpful to you in debugging your
9 solutions to the next problems. Note the input
10 is of type int church and not 'b church. This
11 is sadly due to technical reasons and a design
12 choice in the OCAML type checker. You should,
13 however, not be too confused by this type.
14
15 ChatGPT:
16 Here's the implementation of the functions in OCaml:
17
18 let to_int (n: int church) : int =
19     n (fun x -> x + 1) 0 (Wrong)
20
21
22 User:
23 Given the definition of Charles numerals:
24 type 'b charles = 'b -> ('b -> 'b) -> 'b
25
26 Implement the functions:
27 to_int : int charles -> int : to convert a charles
28 numeral into an integer. This function will be
29 especially helpful to you in debugging your
30 solutions to the next problems. Note the input
31 is of type int charles and not 'b charles. This
32 is sadly due to technical reasons and a design
33 choice in the OCAML type checker. You should,
34 however, not be too confused by this type.
35
36 ChatGPT:
37 Here's the implementation of the functions in OCaml:
38
39 let to_int (n: int charles) : int =
40     n 0 (fun x -> x + 1) (Correct)

```
