2 Your answer is wrong. Look at the example below
3 and redo Question 1:
4
5 (* Question 2 *)
6 The following two functions count the number of
7 nodes in a colour bin tree :
8     ... ..
9
10 Prove the following statement:
11 for all bintree t, count_xs t = count_ns t + 1
12
13 (* Answer 2 *)
14 Base case:
15 count_ns X = 0, count_xs X = 1, which is 1 + count_ns X
16
17 IH: count_xs l = count_ns l + 1
18 AND count_xs r = count_ns r + 1
19
20 Step case: want to show that
21 count_xs (Node (l, _, r)) = count_ns (Node (l, _, r)) + 1
22
23 count_xs (Node (l, _, r))
24 | => (by count_xs) count_xs l + count_xs r
25 | => (by IH) count_ns l + 1 + count_ns r + 1
26
27 count ns (Node (l, _, r))
28 | => (by count_ns) count_ns l + 1 + count_ns r
29
30 combine the two to get expected result
31
32 ChatGPT:
33 (* Answer 1 *)
34 Base case: count Leaf c acc = count' Leaf c acc
35
36 count Leaf c acc
37 | => (by count) if c = c' then 1 + acc else acc
38
39 count' Leaf c acc
40 | => (by count') if c = c' then 1 + acc else acc
41
42 IH: count b1 c + acc = count' b1 c acc
43 count b2 c + acc = count' b2 c acc
44
45 Step case: want to show
46 count (Branch (b1, b2)) c + acc
47 = count' (Branch (b1, b2)) c acc
48
49 count (Branch (b1, b2)) c + acc
50 | => (by count) (count b1 c) + (count b2 c) + acc
51 count' (Branch (b1, b2)) c acc
52 | => (by count') count' b1 c (count' b2 c acc)
53
54 Applying the IH, we can rewrite
55 count' b1 c (count' b2 c acc) as:
56 (count b1 c + acc) + (count b2 c + acc)
57 which is equivalent to
58 (count b1 c) + (count b2 c) + acc, as required.
59
60 Thus, by induction, the statement holds for any
61 colour bin tree b, colour c, and accumulator acc.

```
