

1 **User:**  
2 (\* Question 1 \*)  
3  
4 The following two functions count the number of  
5 occurrences of a colour c in a colour bin tree:  
6                           ... ..  
7  
8 Prove that:  
9 Theorem 1. For any colour bin tree b, colour c,  
10 and accumulator acc:  
11  $\text{count } b \ c + \text{acc} = \text{count}' \ b \ c \ \text{acc}.$   
12  
13 **ChatGPT:**  
14 (\* Answer 1 \*)  
15  
16 Inductive Case:  $b = \text{Branch } (b1, b2)$   
17  
18 We assume that the theorem holds for b1 and b2.  
19 Then we have:  
20  $\text{count } b \ c + \text{acc} = (\text{count } b1 \ c + \text{count } b2 \ c) + \text{acc}$   
21     (by definition of count)  
22  $= \text{count}' \ b1 \ c \ (\text{count}' \ b2 \ c \ \text{acc})$   
23     (by induction hypothesis)  
24  $= \text{count}' \ (\text{Branch } (b1, b2)) \ c \ \text{acc}$   
25     (by definition of count')  
26 Therefore, the theorem holds for any colour binary  
27 tree b, colour c, and accumulator acc.  
28  
29 Step Case:  $b = \text{Branch } (b1, b2).$   
30  
31 Induction Hypotheses:  
32 1. For any color c and accumulator acc,  
33  $\text{count } b1 \ c + \text{acc} = \text{count}' \ b1 \ c \ \text{acc}.$   
34 2. For any color c and accumulator acc,  
35  $\text{count } b2 \ c + \text{acc} = \text{count}' \ b2 \ c \ \text{acc}.$   
36 To Show:  $\text{count } (\text{Branch } (b1, b2)) \ c + \text{acc}$   
37  $= \text{count}' \ (\text{Branch } (b1, b2)) \ c \ \text{acc}$   
38  
39 **Proof:**  
40 We have:  $\text{count } (\text{Branch } (b1, b2)) \ c + \text{acc}$   
41  $= (\text{count } b1 \ c + \text{count } b2 \ c) + \text{acc}$   
42     ( by definition of count )  
43  $= \text{count } b1 \ c + (\text{count } b2 \ c + \text{acc})$   
44     ( by associativity of addition )  
45  $= \text{count } b1 \ c + \text{count}' \ b2 \ c \ \text{acc}$   
46     ( by the first induction hypothesis )  
47  $= \text{count}' \ b1 \ c \ \text{acc} + \text{count}' \ b2 \ c \ \text{acc}$   
48     ( by the second induction hypothesis )  
49  $= \text{count}' \ (\text{Branch } (b1, b2)) \ c \ \text{acc}$   
50     ( by definition of count' )  
51  
52 Hence, we have shown that Theorem 1 holds for any  
53 color binary tree b, color c and accumulator acc,
