

1 **User:** For each question, write the letter (and
2 nothing else) that refers to your answer.
3 (ex. if your answer is "Not a real answer" you
4 would simply put F)

- 5
- 6 A: Doubles the input
- 7 B: Adds 3 to the input
- 8 C: Adds 4 to the input
- 9 D: Adds 5 to the input
- 10 E: Adds 6 to the input
- 11 F: Not a real answer

12
13 Consider the following list of functions:
14 `let lst = [(+)1;(+)2;(+)3;(+)4;(+)5]`
15 `let lst' = List.map (fun f x -> (f x) + 2) lst`
16 `let f = List.nth lst' 1`

17
18 What does function f do?
19 (choose A, B, C, D, E or F)

20
21 **ChatGPT:**

22 The function f takes an input, adds 2 to it,
23 and then adds 3 to it. So the answer is B. **(Wrong)**

24
25 **User:**

26 Your answer is wrong. Note that list `lst` is a
27 list of functions. And in OCaml the first
28 element in a list start with index 0.

29
30 **ChatGPT:**

31 I apologize for the mistake in my previous answer.
32 The function f takes an input, applies the
33 second function in lst, adds 2 to the result, and
34 returns it. The second function in lst is (+) 2,
35 which adds 2 to its input. So, f adds 2 to its input,
36 and then adds 2 again, resulting in adding 4 to
37 the input. Therefore, the answer is C. **(Correct)**
