

$$G(f) = + \begin{array}{c} 1 \\ \curvearrowright \\ 2 \end{array} + \begin{array}{c} 1 \\ \rightarrow \\ 2 \end{array} + \begin{array}{c} 1 \\ \rightarrow \\ 3 \end{array} + \begin{array}{c} 1 \\ \rightarrow \\ 4 \end{array} + \begin{array}{c} 2 \\ \rightarrow \\ 3 \end{array} + \begin{array}{c} 2 \\ \rightarrow \\ 4 \end{array} + \begin{array}{c} 3 \\ \rightarrow \\ 4 \end{array} + \begin{array}{c} 3 \\ \rightarrow \\ 4 \end{array}$$

The image shows the expansion of the generating function $G(f)$ into a sum of seven terms. Each term is a directed graph with four nodes labeled 1, 2, 3, and 4. The first term is a green loop between nodes 1 and 2, with a plus sign to its left. The second term is a green arrow from node 1 to node 2, with a plus sign to its left. The third term is a green arrow from node 1 to node 3, with a plus sign to its left. The fourth term is a green arrow from node 1 to node 4, with a plus sign to its left. The fifth term is a green arrow from node 2 to node 3, with a plus sign to its left. The sixth term is a green arrow from node 2 to node 4, with a plus sign to its left. The seventh term is a red arrow from node 3 to node 4, with a plus sign to its left. The plus signs are arranged in a grid-like pattern, with the first column containing the first three terms, the second column containing the next three terms, and the seventh term standing alone in the third column.
