

**Step 1. Landmark Detection**

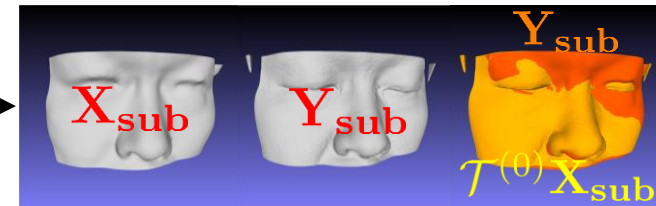

[Main Formulas]

$$L = \sqrt{\frac{(x_j^{\varphi_2} - x_j^{\varphi_1} \cos(\varphi_1 - \varphi_2))^2}{\sin^2(\varphi_1 - \varphi_2)} + (x_j^{\varphi_1})^2}$$

$$\theta = \sin^{-1} \left( -\frac{x_j^{\varphi_1}}{L} \right) - \varphi_1$$

**Step 2. Registration ( $\mathcal{T}^{(0)}$ )**  
using  $X_{ldmk}$  and  $Y_{ldmk}$

**Step 3. ICP ( $\mathcal{T}^{(k+1)}$ )**  
using  $X_{sub}$  and  $Y_{sub}$

( $k = 0, \dots, K-1$ )

**Final Registration**
