

## Without grounding prompt

In what part of the digestive tube do you expect the initial digestion of starch?

The initial digestion of starch occurs in the mouth. Enzymes in saliva **break down starch** into smaller molecules.

## With grounding prompt

**According to Wikipedia**, in what part of the digestive tube do you expect the initial digestion of starch?

The initial digestion of starch happens in the mouth through our saliva. The enzymes found in saliva are essential in beginning the process of digestion of dietary starches. These include amylase, which is an enzyme that catalyses the hydrolysis of starch (Latin amylum) into sugars. Salivary amylase begins the chemical process of digestion.

## Memorized Documents from Pre-training

### Saliva

The enzymes found in saliva are essential in beginning the process of **digestion** of dietary starches

~ **break down starch** to form of

### Amylase

An amylase is an **enzyme** that **catalyses** the **hydrolysis** of starch (Latin **amylum**) into **sugars**.

where it **begins** the chemical process of **digestion**.
