

Question: Ken created a care package to send to his brother, who was away at boarding school. Ken placed a box on a scale, and then he poured into the box enough jelly beans to bring the weight to 2 pounds. Then, he added enough brownies to cause the weight to triple. Next, he added another 2 pounds of jelly beans. And finally, he added enough gummy worms to double the weight once again. What was the final weight of the box of goodies, in pounds?

Chain-of-Thought

This means the weight of the brownies is 3 times the weight before. The total weight at this point is $2 + (2 \times 3) = 8$ pounds. Ken then added another 2 pounds of jelly beans. The current weight is $8 + 2 = 10$ pounds.

The answer is $8 \times 2 = 16$ pounds.

Program-aided

```
def solution():  
    weight = 2  
    weight *= 3  
    weight += 2  
    weight *= 2  
    return weight  
>>> 16
```
