

	Cluster1	Cluster2	Cluster3	Cluster 4	Cluster5
Representat ive Question					
D1					
D2					
Dn					

For each document the human can perform:

- 1) Edit clusters
- 2) Add new cluster by dragging existing questions into that cluster
- 3) Delete a whole cluster
- 4) Merge clusters

On the entire set of documents, the user can:

- 1) Add new representative questions
- 2) Edit those questions
- 3) Recluster by upweighting words

After the user modifies, the system will again recluster the questions in the documents and map each cluster to slots. Thus after every user operation, we will evaluate the slot mapping performance.
