Read the Passage

heparin-induced thrombocytopenia and thrombosis and other side effects of heparin therapy. heparin , first used to prevent the clotting of blood in vitro , has been clinically used to treat thrombosis for more than 50 years. although several new anticoagulant drugs are in development , heparin remains the anticoagulant of choice to treat acute thrombotic episodes. the clinical effects of heparin are meritorious , but side effects do exist. bleeding is the primary untoward effect of heparin . major bleeding is of primary concern in patients receiving heparin therapy. however , additional important untoward effects of heparin therapy include heparin -induced thrombocytopenia , heparin -associated osteoporosis , eosinophilia , skin reactions , allergic reactions other than thrombocytopenia

Cluster6 ^

Cluster Name:('cause',) with explanation: These questions should be related in such a way that they talk about what drugs cause which disease

Questions belonging to this cluster

- What is one of the untoward effects of [heparin?::hypoaldosteronism](#)
- What is one of the untoward effects of [heparin?::thrombocytopenia](#)
- What is one of the untoward effects of [heparin?::hyperkalemia](#)
- What is one of the untoward effects of [heparin?::priapism](#)
