ESBMC-AI Framework
1
A C source code that may or may not be vulnerable
ANSI C
C source code
Efficient Bouned Model Checker (ESBMC)
Clang compiler
AST converter
GOTO converter
Symbolic execution
SMT solver
2
Formal verification of the provided C code
Formal Verification
VERIFICATION SUCCESSFULL
Safe C code
VERIFICATION FAILED
Counterexample
Vulnerable C code
+
Violated property
3
If a property violation is found, it is fed to an LLM with the original C code
LLM module
LLM
Suggested C code
4
C code suggested by the LLM is verified again by BMC.
