

(a)  $k$ -nearest neighbors  
in space  
( $k=4$ )

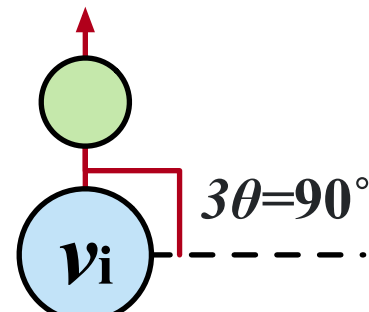

(b)  $k$ -nearest neighbors  
at one angle  $\alpha$   
( $k=2$ ;  $\alpha=60^\circ$ )

(i)

(ii)

(iii)

(c)  $k$ -nearest neighbors at multiple angles ( $k=1$ ;  $\theta=30^\circ$ )  
(Similar graphs are constructed for  $120^\circ$ ,  $150^\circ$ , ...  $360^\circ$ ,  
but skipped due to space limitation)
