

## Few-shot Chain-of-Thought Prompting

Q: If there are 3 cars in the parking lot and 2 more cars arrive, how many cars are in the parking lot?

A: There are originally 3 cars. 2 more cars arrive.  $3 + 2 = 5$ . The answer is 5.

Q: A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Language Model

A: The robe takes 2 bolts of blue fiber and half that much white fiber. So it takes  $2 + 1 = 3$  bolts in total. The answer is 3.

## Few-shot Code Prompting

Q: If there are 3 cars in the parking lot and 2 more cars arrive, how many cars are in the parking lot?

C:

```
'''
```

```
original_cars = 3 # There are 3 cars in the parking lot
```

```
new_cars = 2 # 2 more cars arrive
```

```
total_cars = original_cars +
```

```
new_cars # So the total number of cars in the parking lot is
```

```
original_cars + new_cars
```

```
print(total_cars) # print final result
```

```
'''
```

Q: A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Language Model

```
blue_fiber_bolts = 2 # A robe takes 2 bolts of blue fiber
white_fiber_bolts = blue_fiber_bolts / 2 # Half as many white fiber bolts are needed as blue fiber bolts
total_bolts = blue_fiber_bolts + white_fiber_bolts # Total number of bolts needed is the sum of blue and white fiber bolts
print(total_bolts) # Print the final result
```
