

Question: There are 72 heads and 200 feet inside a cage. How many rabbits and chickens are there?

LLM

Python Script

```
def solve_chicken_rabbit_problem(heads, feet):  
    a = np.array([[1, 1], [2, 4]])  
    b = np.array([heads, feet])  
    try:  
        x, y = np.linalg.solve(a, b)  
        if x >= 0 and y >= 0 and \  
            x.is_integer() and y.is_integer():  
            return int(x), int(y)  
        else:  
            raise ValueError  
    except:  
        print("No solution found.")
```

Program
