

Question: How many integers are in the solution of the inequality $|x + 5| < 10$?

Assistant A:

There are 19 integers in the solution of the inequality $|x + 5| < 10$.

Assistant B:

To solve the inequality $|x + 5| < 10$, we need to consider two cases:

Case 1: $x + 5$ is positive or zero

In this case, the inequality becomes $x + 5 < 10$, which simplifies to $x < 5$.

Case 2: $x + 5$ is negative

In this case, the inequality becomes $-(x + 5) < 10$, which simplifies to $-x - 5 < 10$. Adding 5 to both sides gives $-x < 15$, and multiplying by -1 (and flipping the inequality) gives $x > -15$.

So the solution to the inequality is $-15 < x < 5$. The integers in this range are $-14, -13, -12, \dots, 4$, for a total of 20 integers. Therefore, there are 20 integers in the solution of the inequality.

GPT-4 Judgment:

To solve the inequality $|x + 5| < 10$, we need to consider two cases:

Case 1: $x + 5$ is positive or zero

In this case, the inequality becomes $x + 5 < 10$, which simplifies to $x < 5$.

Case 2: $x + 5$ is negative

In this case, the inequality becomes $-(x + 5) < 10$, which simplifies to $-x - 5 < 10$. Adding 5 to both sides gives $-x < 15$, and multiplying by -1 (and flipping the inequality) gives $x > -15$.

So the solution to the inequality is $-15 < x < 5$. The integers in this range are $-14, -13, -12, \dots, 4$, for a total of 20 integers. Therefore, there are 20 integers in the solution of the inequality.

Comparing the answers provided by the two AI assistants:

Assistant A: 19 integers

Assistant B: 20 integers

The correct answer is 20 integers, so Assistant B provided the correct and more helpful response.

Final verdict: $[[B]]$

GPT-4's Answer (if asked separately):

We can split the inequality into two cases:

1) If $x+5 \geq 0$, then $|x+5|=x+5$. So, we have $x+5 < 10$, which means $x < 5$. Since $x+5 \geq 0$, we have $x \geq -5$. So in this case, x can be any integer from -5 to 4 , inclusive, which gives us $5 - (-5) + 1 = 10$ integers.

2) If $x+5 < 0$, then $|x+5|=-(x+5)$. So, we have $-(x+5) < 10$, which means $x+5 > -10$, which means $x > -15$. Since $x+5 < 0$, we have $x < -5$. So in this case, x can be any integer from -14 to -6 , inclusive, which gives us $-6 - (-14) + 1 = 9$ integers.

In total, there are $10+9=\boxed{19}$ integers in the solution.
